👑 DIGYNEX 360: THE INTERACTIVE FUNCTIONAL HANDBOOK

"The Anatomy of Operational Sovereignty" (2026 Edition)

This handbook serves as the **Definitive Guide** for every interactive component within the DigyNex 360 Business Operating System. It explains the logic, data context, and intended outcome for every "Box" and "Tab" in the platform.

🌟 MODULE 01: PROJECT NEXUS (STRATEGIC HUB)

Context: Long-term portfolio stewardship and executive decision logic.

🛠️ The Global Context Box (Project Selector)

- **Label:** "System Portfolio" vs. "Active Project [ID]"
- **What it does:** This is the **Master State Controller**.
  - When **All Projects** is selected, every widget display aggregates the entire organizational ecosystem.
  - When a **Specific ID** is selected, the system performs a forensic drill-down into that specific project's lifecycle, filtering all KPIs and charts in real-time.

🧠 Tab 1: Strategic Intelligence

Component (Box)	Operational Logic	Executive Outcome
Budget Burn Rate	Tracks $ spent vs. $ allocated via live finance hooks.	Prevents capital leakage and budget overruns.
Schedule Variance	Measures "Plan vs. Actual" physical progress in days.	Identifying project delays 14-30 days before they occur.
Resource Density	Counts active subcontractor clusters and personnel.	Ensures workforce availability for critical path tasks.
Operational Risk	AI-driven anomaly warning (Supply chain delays, cost spikes).	High-priority alerting for executive intervention.
AI Project Rebalancer	Interactive button that suggests resource sharding protocols.	Optimizes throughput by shifting resources from idle projects.

🏗️ Tab 2: Advanced Milestone Health

- **Box: Phase Execution Pulse:** Shows hierarchical progress (Civil → Structural → MEP).
- **What it does:** Allows the CEO to see exactly *which* layer of construction is causing the bottleneck.
- **Metric:** Completion vs. Burn Correlation (Are we 50% done but spent 70% of the money?).

📈 Tab 3: Portfolio Analytics

- **Box: Executive Variance Pulse:** Bar chart showing cost deviations per project sector.
- **Box: Strategic Burn Projection:** Predictive line chart estimating final project cost at completion.
- **Outcome:** Provides "Board Ready" visualizations for quarterly auditing.

📂 Tab 4: Bulk Ingest Hub (The Sovereignty Engine)

- **Box: Manifest Drop Zone:** Supports ingestion of 10,000+ items (CSV/PDF).
- **Automation:** The AI Mapping Engine converts external vendor data (AWR) into internal WBS identifiers automatically.

🚀 MODULE 02: AI SOCIAL VIRAL HUB (GROWTH HUB)

Context: Advanced automated lead discovery and social outreach orchestration.

🎯 Tab 1: AI Social Viral Hub

Component (Box)	Operational Logic	Executive Outcome
Targeting Matrix	Selection of source (LinkedIn/FB) and Minimum Growth Score.	Filters high-intent leads from social noise automatically.
Global Matrix Scan	Counts total active sessions and social data points analyzed.	Real-time visibility into the reach of the AI scanning engine.
Viral Velocity	Percentage-based growth of engagement per hour.	Identifying trending sectors for immediate tactical pivot.
AI Intelligence Node	Strategic text insights generated from social sentiment analysis.	Identifying market needs before they manifest as direct inquiries.
Lead Feed (Discovery)	High-density leads table with Growth Potential Score (50-100%).	Direct engagement queue for the sales team.
AI Outreach Modal	Drafts personalized messages using AI, sent via **n8n** webhooks.	High-speed outreach without manual platform-switching.

🤖 Technical Sync: The n8n & Social Bridge

- **The Engine:** Every "Initiate Broadcast" command triggers a secure **n8n Workflow**.
- **The Flow:** Vue UI → n8n Webhook → Social Platform (LinkedIn/FB) → Lead Capture (Supabase/CMS Sync).

⚙️ MODULE 03: OPERATIONS COMMAND (TACTICAL HUB)

Context: High-speed production execution and forensic financial matching.

🔬 Tab 1: Forensic AI Matching

- **Box: PO/Invoice Matcher:** AI reconciliation of inbound TMS invoices against active PO logs.
- **Goal:** Identifying "Phantom Charges" or billing errors before they hit the financial profit engine.

📊 Tab 2: Operational Log (Daily Transactions)

- **Box: Lifecycle Pulse:** A sequential timeline of every tactical event (PO -> WO -> Result).
- **Sync:** Real-time data sync with the **Transport Management System (TMS)**.

📊 MODULE 04: BI INTELLIGENCE (THE COMMAND CORE)

Context: Global health monitoring and "Full Papare" manifest generation.

🎯 Tab 1: Platform Pulse

Component (Box)	Operational Logic	Executive Outcome
Target Benchmark	Circular tracking of monthly/quarterly growth targets.	Immediate visibility into organizational goal alignment.
Automation Pulse	Real-time monitoring of 24+ active n8n automation nodes.	Ensures system-wide synchronization is 100% active.
Net Profit Engine	Dynamic calculation of Revenue minus multi-app Operational Burn.	Provides the true "Bottom Line" across all business units.

📄 Tab 2: Custom Report Context Builder

- **Box: Metric Universe Selector:** Selects context (Revenue, Expense, Viral Leads).
- **Box: Neural Synthesis Toggle:** Injects AI-generated strategic summaries into the report.
- **Action: Generate Elite Manifest:** Produces a comprehensive PDF/ODF audit of the entire BOS.

📜 MODULE 05: PROJECT CRM (PARTNER HUB)

Context: Client (CMS) management and relationship tracking.

🤝 Tab 1: Partner Registry

- **Box: Profile Matrix:** Directory of clients and subcontractors with performance scorecards.
- **Box: Commission Tracker:** Tracks 5-10% referral payouts for partner leads.
- **Sync:** Live sync with the **Client Management System (CMS)** for lead lifecycle tracking.

🛡️ MODULE 06: PERSONNEL SECURITY (IDENTITY HUB)

Context: Governance and RBAC protection.

🔒 Tab 1: Security Clusters

- **Box: Identity Index:** Executive control over organizational roles (CEO, Manager, Finance).
- **Result:** Ensures zero unauthorized access to sensitive financial or project data.

📡 GLOBAL CROSS-APP SYNCHRONIZATION (CMS / TMS / AUTOMATE)

The DigyNex 360 BOS functions as the **Master Intelligence Overlay** for three core clusters:

1. **Transport (TMS) Sync:** Daily logistics burn and vendor invoicing data is parsed into Module 03 (Operations).
2. **Client (CMS) Sync:** Partner data and Viral Discovery leads are synchronized into Module 05 (CRM).
3. **Automate (n8n) Sync:** All social outreach and report generation tasks are executed via secure automation nodes.

🏛️ SYSTEM BLUEPRINT: THE AUTOMATION MATRIX (WHITE SHEET)

```

    DB -- "Sync" --> R
```

📅 VERSION CONTROL & SYNC

- **Current Version:** v2.2.0 (Integrated AI Growth & Global Sync)
- **Sync Status:** 1:1 Parity with local source files and n8n Cluster alpha-10.
