AI-DRIVEN STRATEGY | PROJECT CAREERNEXUS V2.0

AI Job Finder

MILLION-DOLLAR GLOBAL SUBMISSION ENGINE

This finalized master plan establishes the core strategy for **AI Job Finder**. Fueled by **Elite AI Logic** and **Global Ingestion**, this system eliminates the manual "Chatre" loop through a high-trust automated excellence engine.

1. The Global Discovery Architecture

Instead of manual site-by-site scraping, we utilize a **Unified Job Ingestion** framework:

- **serpApi (One Hub)**: Direct ingestion from Google Jobs globally, ensuring verified vacancy pools regardless of target country.
- **Target Country Selector**: UI-driven pivots to regional hubs (Platsbanken, TopJobs, LinkedIn) based on active country adapters.
- **AI Reality Filter**: Every job post is validated by Gemini Pro to eliminate "ghost posts" and ensure 100% verified matching.

2. Phased Implementation Strategy

⚡ **Phase 1: Smart-Assistant (MVP)**

🤖 **Phase 2: Semi-Automation**

Strict-compliance tailoring, 10+ LaTeX Templates, and Mobile-First PWA interface for core market validation.

Unified Search via SerpApi, elite Gotenberg PDF exports, and multi-tenant n8n dispatch workflows.

🔥 **Phase 3: Beast Mode & Scaling**

Autonomous headless browser submission with Anti-Bot randomized pacing and native App Store launches.

🏢 **Phase 4: Partner Ecosystem**

Integration with Recruitment Agencies for high-value talent indexing and lead-gen partnerships.

3. The Professional Nerve System

Utilizing high-performance technologies for 100% submission integrity:

- **Discovery Engine:** SerpApi.com (Unified Global Careers).
- **Intelligence:** Gemini 1.5 Pro (Elite Content Synthesis).
- **PDF Infrastructure:** Gotenberg.dev / LaTeX / html2pdf.
- **App Monetization:** RevenueCat (Subscriptions, IAP, and Credits).
- **Sovereignty:** GDPR-compliant encryption within secure Supabase vaults.
