TECHNICAL MANIFESTO 2026

Indigo Isle

THE ELITE TOURISM ENGINE ARCHITECTURE

This document outlines the high-fidelity technical strategy and design parameters for building the **Indigo Isle** tourism platform. Inspired by the "PolaTours" luxury aesthetic, this architecture leverages the **DigyNex Modern SaaS Stack** for maximum performance and visual prestige.

1. The Frontend: High-Fidelity Performance (UI/UX)

Unlike legacy WordPress builds, **Indigo Isle** is a Single Page Application (SPA) built on **Vue.js 3** and **Vite**.

- **Velocity Engine (Vite):** Zero-latency loading. The entire luxury experience loads in under 1 second.
- **Cinema-Hero Section:** Native HTML5 video with Serif Lora/Playfair Display typography.
- **Glassmorphism Interface:** backdrop-blur-md across navigation and context modules.
- **Bento-Grid Destinations:** A masonry-style gallery using CSS Grid for bespoke visual hierarchy.

2. The Backend: Data Sovereignty

Real-time PostgreSQL via **Supabase** ensures every experience and travel story is synchronized instantly without reloads.

3. The Nerve System: n8n Automation

Every interaction is synchronized via secure webhooks for an automated inquiry flow:

- **Immediate WhatsApp/Telegram Alert** sent to Sales Concierge.
- **Lead Ingestion** into the Supabase CRM.
- **SMTP Fallback Logic** for personalized luxury outreach.

4. Strategic Comparison

FEATURE	INDIGO ISLE (CUSTOM)	WORDPRESS / ELEMENTOR
Speed (Page Insights)	**99/100 (Mobile & Desktop)**	40-70/100 (Plugin Bloat)
Security	No plugins to hack; custom-built.	Vulnerable to SQL/Core updates.
Scalability	1,000+ simultaneous webhooks.	Server often hangs on heavy forms.

FEATURE	INDIGO ISLE (CUSTOM)	WORDPRESS / ELEMENTOR
Total ROI	High-ticket prestige ($3k+).	Commodity look ($300).
